

About AOA Dx Inc.

AOA Dx exists to transform women's health. We are leading the next generation of cancer diagnostics, applying lipidomics, proteomics, and machine learning to enable earlier diagnosis of ovarian cancer for women with signs and symptoms - an area where no diagnostic tool exists today.

Clinical Laboratory Scientist

We are seeking a talented **Clinical Laboratory Scientist I** (CLS I) to perform routine clinical testing in a CAP/CLIA-certified diagnostic laboratory under appropriate supervision. This entry-level role will initially support R&D activities to enable technology readiness and transfer to a CAP/CLIA Lab. Specifically, this role will support the preparation and analysis of patient serum and plasma specimens using LC-MS and immunoassay platforms while adhering to established standard operating procedures (SOPs), quality requirements, and regulatory standards.

Key Responsibilities

Clinical Testing & Sample Preparation

- Perform basic sample preparation of patient serum and plasma specimens, including aliquoting, dilution, and routine extraction steps, following established SOPs.
- Perform high-complexity testing under CLIA regulations.
- Assist with testing on LC-MS platforms and automated immunoassay analyzers under supervision.
- Accurately load samples, reagents, and controls onto analytical instruments.
- Review test data for completeness and consistency; escalate unusual or out-of-range results to senior staff or supervisors.

Quality & Regulatory Compliance

- Follow CAP, CLIA, and laboratory quality standards at all times.
- Perform routine quality control (QC) procedures and document results as directed.
- Participate in training activities related to method validation, proficiency testing, and competency assessments.
- Report deviations, instrument issues, or quality concerns promptly to supervisory staff.

Documentation & Data Entry

- Record testing activities, QC results, and maintenance logs accurately in the laboratory information system (LIS) or approved documentation systems.
- Maintain clear, organized, and compliant laboratory records.

Laboratory Support & Operations

- Maintain a clean, organized, and safe work area in accordance with laboratory safety guidelines.
- Assist with reagent preparation, inventory restocking, and supply tracking.
- Support day-to-day laboratory operations and collaborate with team members to ensure timely test completion.

Required Qualifications

- Bachelor's degree in Clinical Laboratory Science, Medical Technology, Chemistry, Biology, or a related scientific field.
- Experience working in a regulated lab (i.e. CAP/CLIA, GLP, GMP, EPA)
- Familiarity with basic laboratory techniques and handling of human specimens.
- Willingness to learn and follow detailed SOPs in a regulated environment.

Preferred Qualifications

- ASCP (or equivalent) certification or certification-eligible status.
- Academic or internship experience with HPLC, LC-MS or immunoassay platforms.
- Prior experience in a clinical or regulated laboratory setting (internship or training acceptable).

Skills & Competencies

- Strong attention to detail and organizational skills.
- Ability to follow instructions and work under supervision.
- Basic computer skills and ability to learn laboratory software systems.
- Effective communication and teamwork skills.
- Commitment to quality, safety, and regulatory compliance.

Physical & Work Requirements

- Ability to stand or sit for extended periods.
- Manual dexterity for pipetting and handling small volumes.
- Ability to lift up to 40lbs as required.
- Use of appropriate PPE when handling clinical specimens.

Annual Salary Range: \$60,000 - \$75,000

Location: On-Site Denver, CO
